

SCRUM

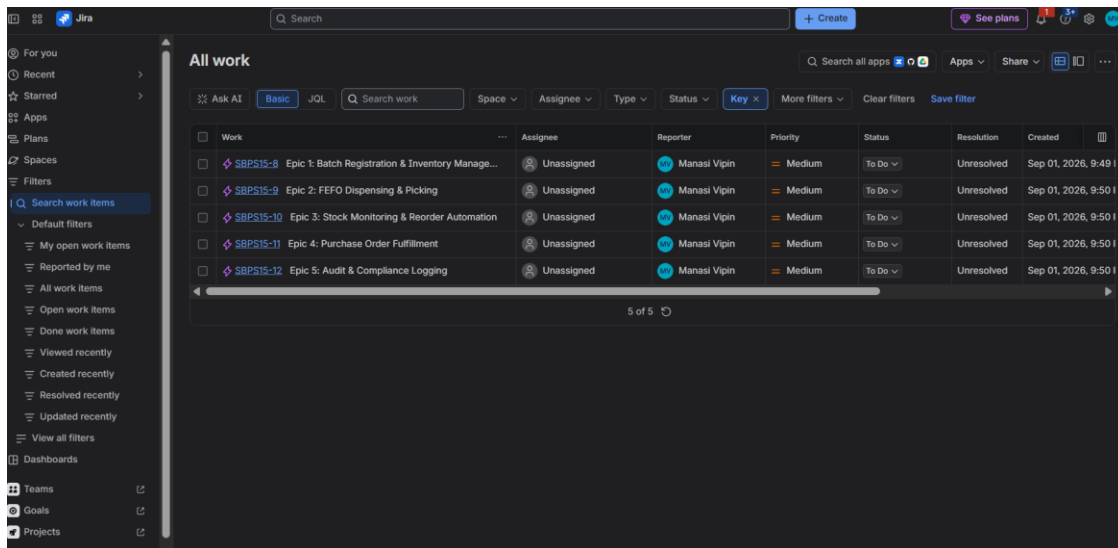

Manasi Vipin_PES1UG24CS260-BPS#15

1. Product Backlog — User Stories

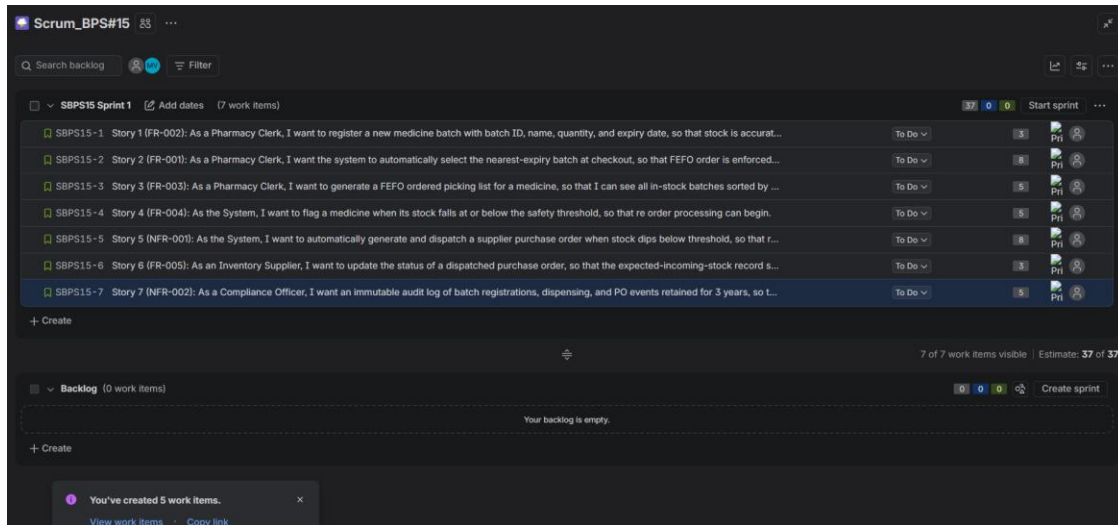

All 7 requirements written as User Stories in standard Agile format

2. Epics Created

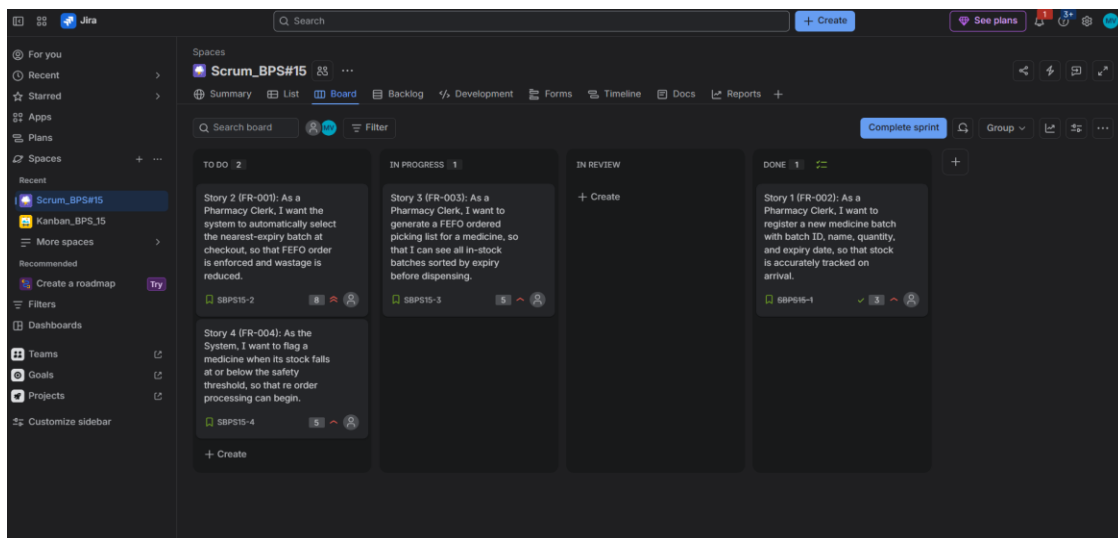

5 Epics representing the system's major functional themes: Batch Registration & Inventory Management, FEFO Dispensing & Picking, Stock Monitoring & Reorder Automation, Purchase Order Fulfillment, and Audit & Compliance Logging.

3. Story Point Estimation (Fibonacci)

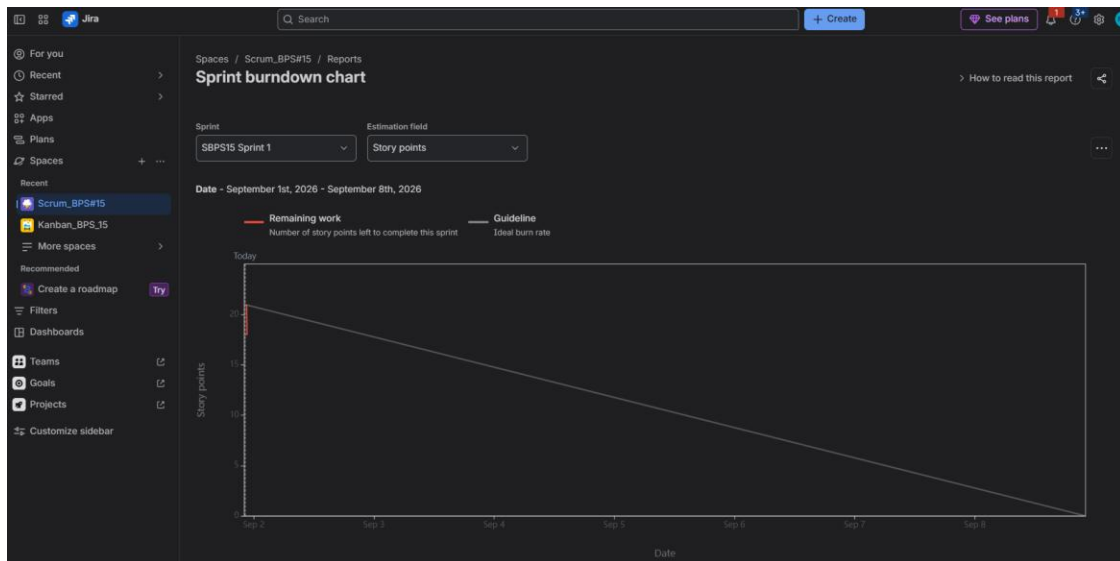

Story Points assigned to all 7 Stories using the Fibonacci sequence, based on complexity and uncertainty: 3, 8, 5, 5, 8, 3, 5 totalling 37 points, with the FEFO auto-select and auto PO generation stories rated highest at 8 points each.

4. Sprint 1 — Active Board

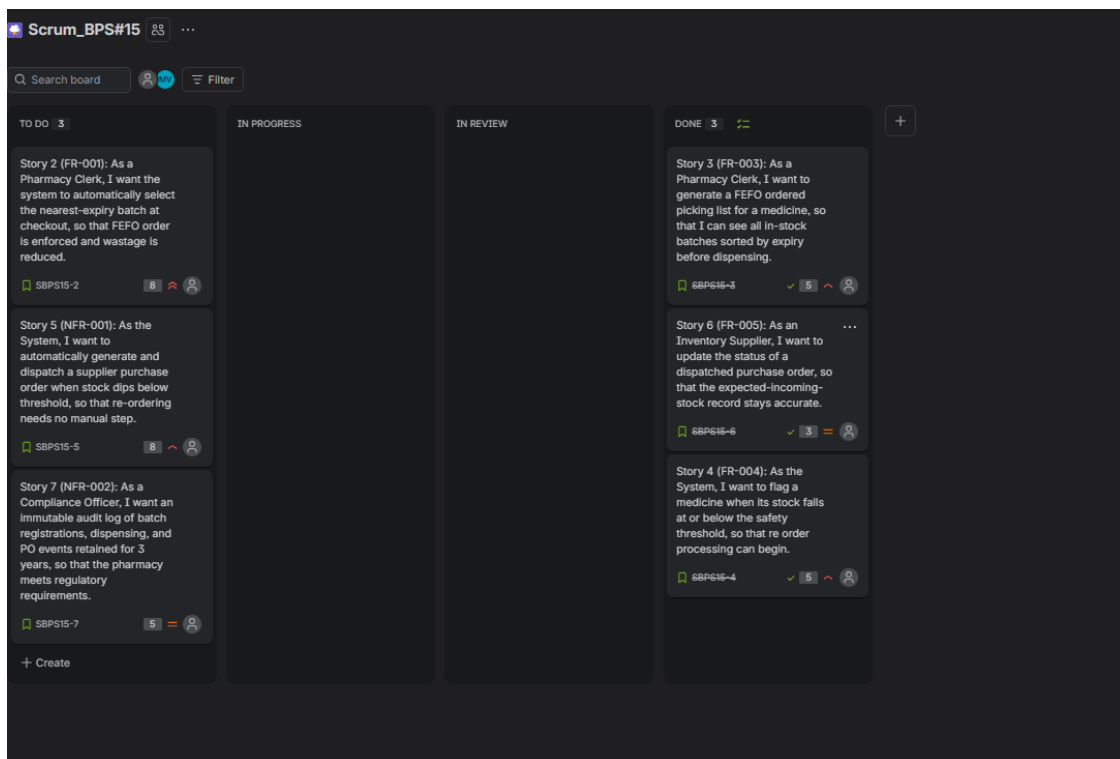

Sprint 1 (Sep 1–8, 2026, 21 points across 4 stories) mid-progress: Story 1 (Register Batch) completed, Story 3 (FEFO Picking List) in progress, Stories 2 and 4 remaining in To Do.

5. Sprint 1 — Burndown Chart

Sprint 1 burndown chart showing the remaining-work line starting at 21 points and dropping to 18 after Story 1 was completed — tracking above the ideal guideline line.

6. Sprint 2 — Active Board

Sprint 2 (34 points across 6 stories, including 2 carried over from Sprint 1) after simulated progress: Stories 3, 4, and 6 completed (13 points), Stories 2, 5, and 7 remaining in To Do.

7. Sprint 2 — Burndown Chart

Sprint 2 burndown chart showing the remaining-work line starting at 34 points and dropping to 21 points after 13 points' worth of stories were completed.

Reflection Questions

1. Did your estimations reflect the actual effort?

Mostly yes. The 3-point stories like Register Batch and Acknowledge PO were easier and got completed faster. The 8-point stories like FEFO Auto Select and Auto PO Generation took more time and were still incomplete, which made sense because they had more steps involved.

2. Was your backlog well-prioritized?

Yes. I gave higher priority to the main FEFO and stock-monitoring features because they are the most important parts of the system. The supporting features like PO acknowledgment and audit logging were given medium priority.

3. How did your simulated sprint align with your plan?

Sprint 1 was a little slower than I expected, since only 1 out of 4 stories was completed. In Sprint 2, we completed 3 more stories. The bigger 8-point stories took more time, so they were harder to finish within the given time.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed that our work was getting completed, but not fast enough to finish everything within the sprint. It made me realise that we probably took on a little too much work, especially the bigger 8-point stories. Breaking those stories into smaller tasks or taking fewer stories into a sprint would make the plan more realistic.
